

IMR

Industrial Material Recycling Ltd.

creating value from waste

IMR uses latest industrial 'vision imaging' technology to reduce the cost of outdated X-Ray and film storage, sorting and disposal

Reducing photographic material storage and disposal costs

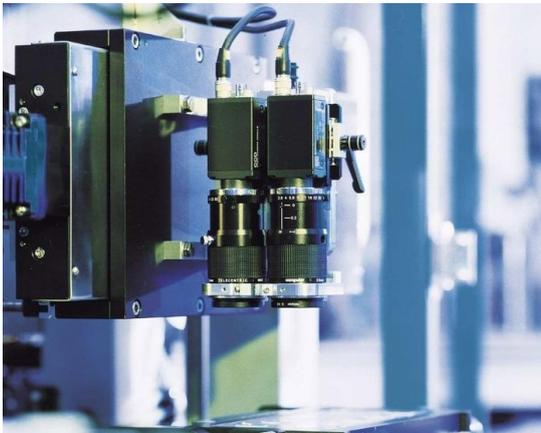

IMR has extensive experience of implementing cost reduction projects across a wide range of industries.

By applying the IMR methodology to both industrial and service sector photographic and X-ray disposal routes IMR is able to offer:-

- ✓ **Maximum 'value' for surplus X-ray/Photographic material by optimising the recycling route for particular types of photographic or X-ray materials**
- ✓ **Secure & certified destruction of all records in accordance with BS EN 15713:2009**
- ✓ **Professional, low cost, sorting of records prior to disposal if required using latest vision imaging technology to ensure absolute record integrity**
- ✓ **Minimal operational disturbance to hospital or facility during disposal**

Ensuring Medical Record Integrity Using the Latest Vision Imaging Technology

Ensuring record integrity in any record disposal process is critical. IMR use the latest industrial vision imaging technology to inspect record files as a key element of the offsite sorting process prior to any film disposal.

This ensures:-

- ✓ **Fast and accurate identification of key data such as date of birth, patient or reference numbers**
- ✓ **Ability to sort for disposal on key data without risk of human interpretation error**
- ✓ **Ability to produce full electronic report of sort results**

Record Security & Integrity

Using the latest vision imaging technology to identify any records that must be retained ensures the risk of any file being inadvertently disposed of is virtually eliminated. This technology also allows rapid processing of large volumes of material ensuring costs are minimised. Once records for disposal have been identified & confirmed, the IMR disposal route ensures:-

- ✓ **Secure disposal of confidential patient or industrial records by industrial shredding**
- ✓ **Issue of secure disposal certification to client to ensure ISO compliance**
- ✓ **Recycling of shredded paper & cardboard records to ensure maximum value is extracted in the disposal process and landfill is avoided.**
